STORCH-CIRET GROUP
PAINTING TOOL SYSTEMS

Who are we?

Ciret Ltd is part of the Storch-Ciret Group, Europe's number one painting and decorating tool manufacturer, with an annual turnover of more than 200 million euros, 1,400 employees and over 120 years of industry experience.

Ciret Ltd are the UK's best kept secret, as we are manufacturers of quality painting and decorating tools with a range that covers everything you need for

a decorating project from preparation tools right through to paint applicators. The only thing we don't offer within our ranges are paints and wall coverings. We therefore pride ourselves in providing the right tools for professionals as well as offering quality solutions for DIY enthusiasts.

We have five core brands within the UK each taking you through a different stage of the project life cycle from preparation with Prep and Masq right through to the applicators of ROTA! and Kana and not to forget our Beeline brand of wallpaper adhesives.

Why Choose Ciret?

- Quality products manufactured in our own factories
- Next day delivery service (on all orders placed before 11.30am)

Our History

Ciret was established in 1961 as Homekey Limited supplying quality brushes throughout the South of England. In 2005 we moved premises and during the same year we were acquired by the Ciret Group where we were renamed Ciret Ltd.

In 2011 Ciret holdings merged with Storch holding and formed the Storch-Ciret group with its Head Office being based in Wuppertal, where it all started over 120 years ago. This merger made us the leading expert for painting and decorating tools in Europe. To find out more visit www.storch-ciret.com/en/our-brands/storch.html

Looking back to where it all started back in 1896, the decorative painters Brueckmann, Boysen and Weber started the "School of painting for Decorative Wall Design" in Elberfeld (part of Wuppertal, Germany). The first product they sold which started the long tradition was the copper stencil. In 1919 Wilhelm Greten took control of the business which saw its expansion into manufacturing with the setting up of a factory for paint brushes, rollers and additional painting tools.

The company continued to grow over the next 80 years, with management of the company taken over by J.R. Rogusch (Wilhelm Greten's son-in-law) in 1952 and then Horst Rogusch (Wilhelm Greten's grandson) in 1976.

Our Production Facilities

We produce more than 50% of our entire product range in our own factories in Europe and China.

For our customers this means:

- Consistent quality
- Guaranteed supply
- Fulfilment of special requests
- Best possible purchase and sales prices through optimal global procurement of raw materials and finished products.

We are the No.1 manufacturer of rollers in Europe, with our main production facility in Pelhrimov, in the Czech Republic, manufacturing a comprehensive range of rollers and brushes. We own two significant manufacturing facilities in China, a brush production business in Zhejiang and a roller production business near Beijing. Today we are the 4th largest producer of painting tools in China and the 3rd biggest exporter of goods out of the same country.

ROTA!

Ciret Ltd.

Here at our UK office we have a 100,000 sq.ft warehouse and logistics facility which encompasses an onsite production capacity to produce over 60,000 kits per week.

Our Research and Development department in Wuppertal has over 100 people working around the clock to make improvements to our existing range along with developing new innovations for the painting and decorating tools assortment.

Wherever the manufacturing facility is located the same principles and high standards, developed by Ciret over the years, apply. Close monitoring of all production processes ensures a stable and controlled quality for all products we manufacture.

These same high standards are then expected from our supply partners to ensure the same consistent quality is applied to every product that we sell.

The Storch-Ciret Group's painting and decorating tools, accessories and systems cover every step of the work process from preparation and material coating to working safely.

Logistics

Ciret has logistics and packaging centres in the heart of Europe, with modern, automated logistics and packing centres in England, Germany, the Czech Republic and Latvia. Additional warehouses in Belgium, France, Spain, Finland, Romania and Russia ensuring we can provide customers with their products quickly and reliably across Europe and beyond. Below are a few facts and figures about our facility here in England to illustrate our logistics capabilities:

- 100,000 square feet total area
- 9,500 pallets capacity
- 98.5% delivery ratio
- Capacity to produce over 60,000 kits a week
- Delivery time within UK less than 48 hours and 72 hours within Western Europe
- Over 1,500 different products in stock

ROTA![®]

Paint rollers and refills were developed as recently as the 1940's. Then in 2010 the EU directive on volatile organic compound content of painting materials (VOC2010), which addressed the issue of potentially cancer causing solvents took effect and had a significant impact on the development of the market. It brought about big changes in the make up of paint and in turn has led to changes in the requirements of paint rollers.

As a leading manufacturer we have to follow these changes very closely in order to develop and continuously enhance our rollers and refills. We are continuously working on a variety of plushes and production technology which give the optimal performance with new paints. A close relationship with the biggest paint and other coating material producers has been a key element of our development strategy for many years.

Refill manufacturing at Ciret factories in Germany

Different fabrics will give a very different performance with different paints, so when buying a refill decorators should always consider the importance of ease of use, coverage, finish and life then balance it against cost and the quality of paint they are using.

Performance with standard emulsion paint

Polyamide (Dualon) 100mm, 100mm Jumbo, 230mm, 250mm, 300mm & 380mm

Designed for extra durability and long life on rough surfaces, polyamide sleeves are most commonly used on uneven, textured surfaces such as masonry and other exterior surfaces. Polyamide sleeves are easy to clean and offer minimal fabric shedding.

Microfibre 100mm, 100mm Jumbo, 230mm, 250mm & 300mm

Gives a superior all round performance, with higher paint loading properties than other fabrics, releasing the paint more smoothly with reduced spatter and giving a great smooth finish. Microfibre is one of the most versatile fabrics and is suitable for use with almost all paints, from emulsions and glosses to woodcare products.

Advanced Polyester (Toptex) 100mm, 100mm Jumbo, 230mm & 300mm

Superior absorbency for the best paint pick-up and greater coverage. Extra fine, high density fibres give a very smooth finish.

Polyacrylic (Silver Stripe) 100mm, 100mm Jumbo, 230mm, 250mm & 300mm

A durable and long life fabric. Excellent all round performer giving great paint loading, coverage and finish.

Acrylic 100mm, 230mm, 250mm & 300mm

Acrylic fabric is a fantastic all-rounder. A synthetic fabric, which is particularly durable, and offers a great all round performance with exterior paint, emulsion and water based paint.

Polyester 180mm, 230mm, 300mm & 380mm

When cost is the primary consideration polyester sleeves give the best value and level of performance. Used with emulsion and water based paints this fabric will perform well in terms of paint loading and finish, with minimum expenditure.

Magic Felt 100mm, 230mm, 300mm

A unique, high density fabric which gives a perfect, smooth finish. Exceptional paint loading & coverage.

Velour 100mm, 100mm Jumbo, 180mm, 230mm & 300mm

A very traditional professional decorator's product. This synthetic woven fabric provides an excellent finish as well as being longer lasting than other gloss sleeves. This high quality, pile shed free sleeve is not only suitable for gloss and satin paints but is also ideal for low viscosity woodcare products and varnishes.

Flocked Foam 100mm

Gives a superior, super smooth mirror-like finish with gloss, satin paints and varnishes. The dense foam is covered with a very short pile synthetic flock to give the best possible smooth finish.

Foam 50mm, 100mm, 150mm, 180mm & 230mm

A pile shed free finish is guaranteed with foam sleeves, and a high density of foam gives a great smooth finish when used with gloss and satin paints on a flat surface.

Nylon 100mm, 230mm, 250mm, 300mm, 380mm & 450mm

Nylon is a woven synthetic fabric which is resistant to solvents, making it ideal for use with solvent based paints, including resin and epoxy paints, as well as gloss, satin paints and wood stains.

Other size refills are available in the above fabrics, along with other fabrics by special order.

Please contact your sales representative or the sales office to discuss.

MIROX60	60grit Mirox Sheets 230mm x 280mm (10pk)	6416868 506938	1

STEARATE FINISHING PAPER ROLL

MIRKA

- Stearate paper is loaded with a dry lubricant which is released in use to reduce clogging
- Particularly useful in sanding coats of varnish and paint as the stearate "soap" prevents clogging and increases the useful life of the sandpaper

CODE	DESCRIPTION	BARCODE	PACK
FPR5-400	400grit 115mm x 5m	6416868 272512	1
FPR5-320	320grit 115mm x 5m	6416868 272505	1
FPR5-240	240grit 115mm x 5m	6416868 272499	1
FPR5-180	180grit 115mm x 5m	6416868 272475	1

CAROT PAPER SHEETS

MIRKA

- This stearate coated abrasive product is for dry sanding applications. It has been developed especially for hand sanding of wood, sealers, paint and lacquers
- The backing consists of a flexible, impregnated latex paper, which is ideal for profile sanding
